

ENERGY DATA LOGGING

— real data for real decisions —

- Understand how operating profiles impact energy usage
- Optimize fleet operations and offerings
- Unlock hidden cost savings
- Support sustainability goals; measure your CO₂ footprint
- Enhance service & maintenance operations
- Optimize unit performance with preventive troubleshooting

Energy Data Logging

Real data for real decisions

We're all working on lowering energy consumption, CO₂ emissions, and costs; using only what we need to get the job done, not more.

How can we achieve environmental and bottom line goals without accurate usage information?

How can we get where we're going if we don't know where we're coming from?

Our new energy data logging feature is standard on all Thermo King MAGNUM PLUS® units starting in 2018; it tells you exactly how much power your reefer is using. All the time.

Accessible, 360° power usage data

Our energy data logging adds to your power consumption database:

- Logs energy usage during reefer operation
- Makes data accessible via the controller and data download
- Captures a 360° view of power usage including current power draw, trip power usage and lifetime power consumption for the reefer

Better data, better decisions

Decisions can only be as sound as the data on which they're based. With Energy Data Logging, you'll know how much energy a reefer actually consumes, depending on how it's being used. That means you can make more accurate, informed decisions — and that's good for both the bottom line and sustainability goals.

Operate responsibly

- Knowing your actual carbon footprint helps in achieving your sustainability goals, and those of your customers
- Understanding power consumption gives you the opportunity to reduce it; less power means less energy and a smaller carbon footprint

Real data, real decisions

Energy data logging keeps you informed with on-the-job, real-life power consumption, so you can make better decisions about power usage than ever before.
