

Date: June 30, 2026
Subject: TracKing® June Release Notes
Location: e-Tech Library

Products: TracKing.com, TracKing Pro
Description: June release notes for the TracKing website are listed below.

TracKing Fixes:

Wrong Confirmation Mail Being Sent to User

- Existing Behavior: When a user creates a customer account without selecting custom data integration, a confirmation email is sent to the user who created the customer account. However, the email incorrectly states that custom data integration was also created due to wrong email template.
- New Behavior: When a user creates a customer account without custom data integration, a proper confirmation email is sent to the user who created the customer account.

New Logic Fix for REB Autoswap

- Existing Behavior: When an existing device with REB is swapped with a TK BlueBox or TKV5, the product field is not updated.
- New Behavior: When an existing device with REB is swapped with a TK BlueBox or TKV5, the product field should update accordingly:
 - If a TK BlueBox is connected, the product field should display BlueBox (O2).
 - If a TKV5 is connected, the product field should display BlueBox (AT&T).

TK Connect Mobile App:

Unexpected Device Disconnect Pop-up on Service TAP

- Existing Behavior: A device disconnect pop-up is displayed when navigating to Service TAP.
- New Behavior: The device disconnect pop-up is not displayed when navigating to Service TAP.

App Crash when Clicking on "Update Setpoint"

- Existing Behavior: The application crashed when clicking on Update Setpoint.
- New Behavior: The application does not crash when clicking on Update Setpoint.
