

AIRFLOW MATTERS

THERMO KING'S SUPERIOR AIRFLOW MAKES A DIFFERENCE!

- Greater high speed engine airflow helps assure complete trailer pull down and load protection
- Flexible low speed engine airflow options allow better air circulation during low speed engine operation
- Thermo King offers both, Carrier neither

All results and findings are based on internal testing and calculations based on AMCA 210 as performed by Thermo King engineering.

Precedent's high airflow can make a difference, reaching pallets in the back of the trailer.

Because the pallet in the back is just as important as the pallet in the front.
